Setting up AWS Cognito:

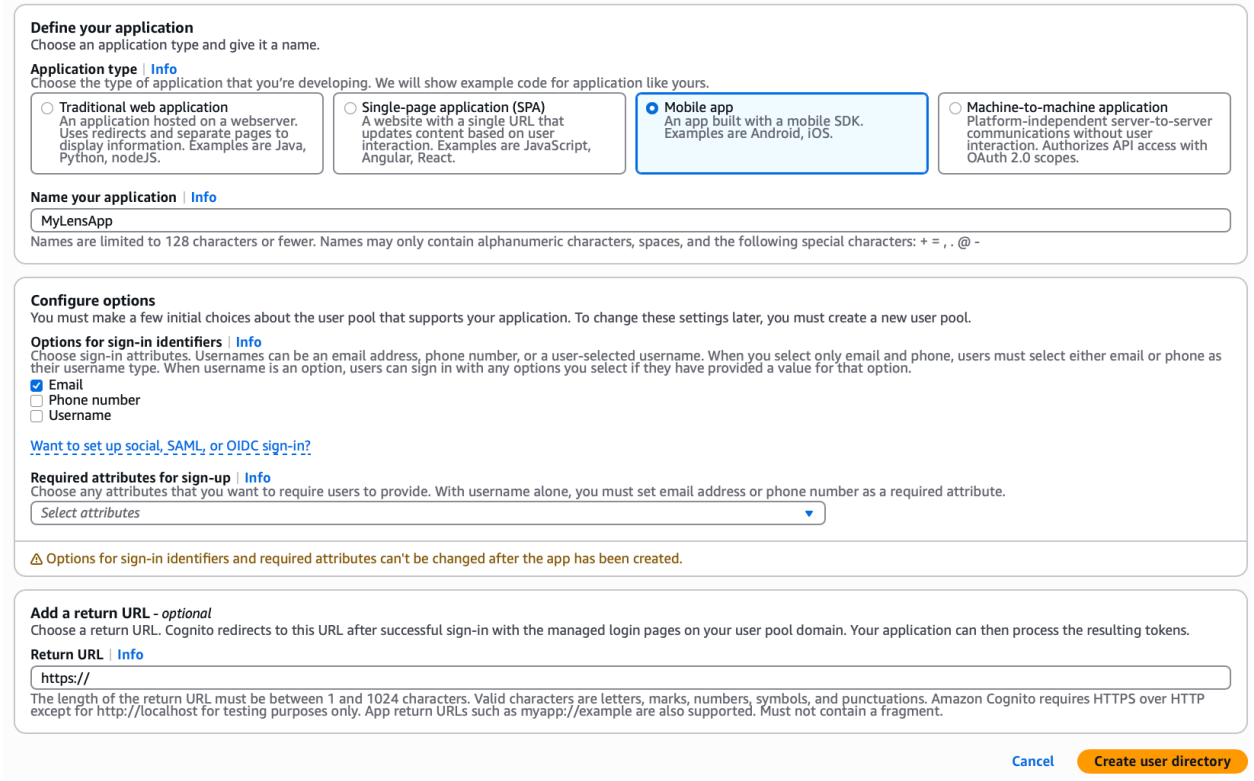

1. Navigate to the AWS Management Console at https://console.aws.amazon.com.
2. Log in with your AWS credentials.
3. Ensure you're in the correct region (e.g., US East (N. Virginia) us-east-1) via the region selector in the top-right corner. Cognito user pools are region-specific.
4. After logging in, use the search bar to find the Cognito service

5. Select Cognito and click on “create user pool” button.

6. Configure the settings as shown in the image below.

7. Create User Directory and go to overview.
8. User pool ID will be created.
9. In left menu, under applications, click on App clients, click on the app we just created to view the app client id.
10. Note down user pool id and app client id.
